

IMPROVE YOUR SOUND AND PICTURE WITH MAGIC

The Mondial Antenna Ground Isolation Circuit (MAGIC) will remove both audio and video noise emanating from the ground found in most systems connected to either cable TV or a roof antenna. In some cases the audio noise will be heard as hum. The MAGIC is the only component capable of both removing noise and improving the picture quality of an audio/video system.

The MAGIC circuit also contains, an advanced gas discharge Fast Attack Resistance Technology, lightning suppressor. It prevents lightning and static electricity build-up from damaging your system at its most vulnerable point.

The MAGIC's heavy gauge cast aluminum chassis contains advanced miniature surface mount circuitry with over 30 components. This patented device is so effective at eliminating this audio and video noise problem that it is used by network broadcasters, federal security agencies and jet airplane manufacturers.

You'll be able to hear and see the effectiveness of the MAGIC by performing the following simple test. The amount of reduction in audible noise and the increase in picture quality you will experience is directly related to the resolution capabilities of your A/V system. The higher the quality and the larger your TV screen the greater the improvement you'll see.

Switch your A/V system to either the VCR,

Laser disc or DVD input. Insert what you consider to

be your highest quality tape or disc. Watch and listen

to a portion of this source

with your cable TV and/or roof antenna still connected

to your system. Now disconnect your cable TV

and/or roof antenna from your system.

(Note: If a splitter is used disconnect all connections at the splitter). When you watch and listen to the same

portion of your source you will see and hear

the improvement.

**THE ONLY SPLITTER IN THE WORLD
THAT WILL IMPROVE YOUR PICTURE
QUALITY RATHER THAN DEGRADE IT**

The MAGIC SPLITTER is by far the world's finest because it is the only splitter that can improve the quality of the picture.

Within the heavy cast aluminum chassis are three circuits. The circuit that divides the signal is engineered for military use and totally encapsulated. Each divided signal is then passed on to its own separate and fully isolated MAGIC circuit. This patented technology completely blocks any audio or video noise from entering the system via the connected grounds.

You can experience for yourself the improvement your system will derive from the MAGIC SPLITTER by simply following steps 1 to 5.

When you consider the amount you have invested in your audio/video system, the MAGIC and MAGIC SPLITTER are incredible values. Without them your system will not perform at the level intended by both you and the manufacturers of your components. Perform the test and prove it to yourself.

"Besides the picture quality of the TV being dramatically improved, why did I mention that the other equipment also benefited?... The improvement you'll get from the MAGIC on your hi-fi system is just like when you add an AC filter to the system."
